

ScottMadden Examines How Nuclear Fleets Are Applying Innovative Technology to Improve Safety, Reliability, and Costs

ATLANTA, GA – (March 1, 2017) – ScottMadden, Inc., one of North America’s leading energy consulting firms, recently sponsored DevonWay’s 8th Annual Continuous Improvement Conference (Ci8) in San Diego, CA. This event provided a unique opportunity for process owners and executives from different industries to discuss their approach to constantly shifting challenges.

Ed Baker and Sean Lawrie, partners at ScottMadden, attended the event and developed insights on how nuclear operators are applying innovative solutions that leverage technology to improve safety and reliability while reducing costs. “The use of real-time data from the field will be a game changer for how outages are managed,” said Mr. Baker. “This is similar to the enhancement ScottMadden delivered for Bruce Power with Nu-PathNETSM where the implementation of real-time gamma monitors eliminated person-dependent data collection workload, improving safety and reducing costs,” added Mr. Lawrie.

About ScottMadden’s Energy Practice

We know energy from the ground up. Since 1983, we have been energy consultants. We have served more than 400 clients, including 20 of the top 20 energy utilities. We have performed more than 3,000 projects across every energy utility business unit and every function. We have helped our clients develop strategies, improve operations, reorganize companies, and implement initiatives. Our broad and deep energy utility expertise is not theoretical—it is experience based.
